Gen AI Academy — APAC Edition

CommunityCare AI

AI for Better Living and Smarter Communities

Build in APAC. Build for the world.

Participant:

Gaurav Tripathi

Participant Details

PARTICIPANT NAME	Gaurav Tripathi
PROBLEM STATEMENT	Underserved, elderly, and low-income residents across APAC communities often lack timely access to first-line health guidance, medication support, and mental wellbeing check-ins — leading to preventable health crises and rising community healthcare burden.
CHALLENGE TRACK	AI for Better Living and Smarter Communities
SOLUTION	CommunityCare AI — a Gen AI companion offering symptom triage, medication reminders, mood check-ins, and a live community health pulse for local health workers.

Project Overview

What we built and why it matters

01

Symptom & Wellness Chat

Plain-language AI triage guidance: emergency, see a doctor soon, or home care — not a diagnosis, but a fast, trustworthy first step.

02

Medication & Routine Reminders

Large tap-target reminders and a streak tracker, designed for elderly and low digital-literacy users.

03

Mental Wellbeing Check-ins

A 5-second daily mood check-in with supportive, non-judgmental responses and escalation prompts.

04

Community Pulse Dashboard

Anonymised, aggregated trends that help NGOs and health workers spot rising issues and allocate resources early.

How It Works

Prototype architecture and Gen AI roadmap

Expected Outcomes

What success looks like for a pilot community

↓ Preventable ER visits

Earlier triage guidance reduces avoidable emergency room trips.

↑ Medication adherence

Simple reminders help elderly residents stay consistent with care plans.

↑ Early issue detection

Aggregated trends let health workers act before small issues spread.

↑ Reach in underserved areas

Low-bandwidth, plain-language design works where formal healthcare access is limited.

Thank You
